HEART  
 ATRIUM  
 OXYGEN  
 ORGAN  
 VENTRICLE  
 CARDIAC

Hello! My name is Echo. I'm so grateful you joined my picnic today!  
 The human body is an organized system of parts that work together to keep us living a healthy life!

The **heart** is an **organ**. Its special job is to pump blood. Imagine the heart is like a home with four rooms called **chambers**. **Atria** are the two upstairs rooms; they receive blood. **Ventricles** are the two downstairs rooms; they pump blood out of the heart.

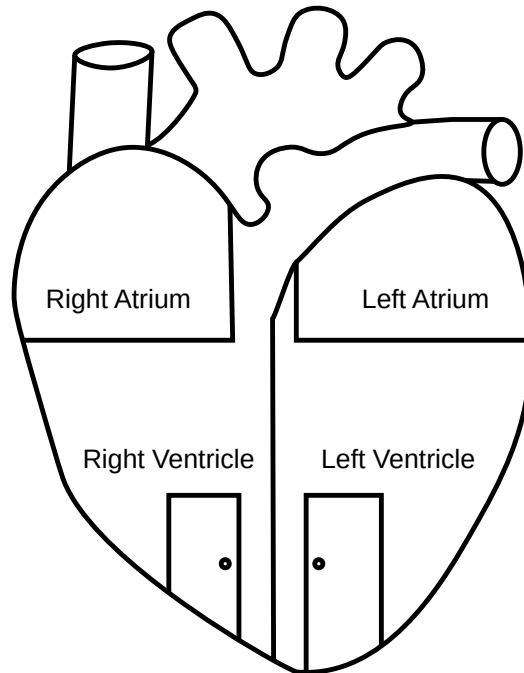

The main function of red blood cells is to carry oxygen around the body!

**Design your own red blood cells!**

Picture your heart as a two-story house with four rooms.

**Color** in the **Atria** (upstairs) and **Ventricles** (downstairs) with colors that make you happy!

**ECHO & FRIENDS PICNIC**
